We are creating e-commerse project and start with registration form.

200103069 Rakhymbaeva Zhaniya
200103029 Ernar Madiyar

to run code
1) create db named testdb with table usertest (id int, fullname varchar(100), password varchar(100))
2) then run code go run main.go
3) go to port :8080/create

Firstly, we create database with table where we will save our users personal info after registration .
In code , alse we connect to assets (as css in future there will be js and so on)
connected to database and after filling form it post data to usertest table
